

Window Film Leads -> Workflow (Prototype)

What it is

Offline prototype that turns window film leads into a repeatable workflow to improve conversion and average order value.

Runs as a static page and stores data in browser localStorage.

Who it's for

Window film company owners, sales reps, or office managers handling inbound leads.

What it does

- Capture and view lead details with status, goals, and notes.
- Score leads and show next best action and missing info.
- Generate follow-up tasks with due times.
- Produce ballpark quote ranges from sqft, film type, and assumptions.
- Generate proposal HTML with pricing breakdown.
- Draft reply messages and copy to clipboard.
- Export and import the local JSON database.

How it works

- UI: index.html with styles.css and windowfilm.css; app.js handles rendering and interactions.
- Data (static mode): app.js reads/writes browser localStorage key wf_db_v1 and seeds sample leads.
- Optional server: server.js serves static files and exposes /api endpoints for leads, tasks, quotes, messages, and settings.
- Server storage: src modules use src/store.js to read/write JSON files in data/ (db.json, settings.json).

How to run

- Open index.html in a browser (offline, uses localStorage).
- Optional: run npm start and open http://localhost:3000 to use the Node server.
